

The Indoor Environment

All buildings, including homes, schools, and commercial properties, should be a source of safety and comfort, not concern. Unfortunately, biological and chemical contaminants are frequently found indoors, and can have a significant impact on our health. Airsciences specializes in identifying, measuring, and correcting a variety of environmental conditions that can contribute to poor air quality, hygiene, and general indoor health. Our goal is to make your property a safe environment to live, work and, most importantly, breathe.

The Impact On Your Health

The EPA and its Science Advisory Board have consistently ranked indoor air pollution among the top five environmental risks to public health. U.S. EPA studies have shown that the levels of many airborne pollutants may be 25 to 100 times higher indoors than outdoors.

There are numerous sources of indoor air and surface contamination including mold, bacteria, viruses, chemical by-products, and volatile organic compounds (VOCs). These contaminants can have a variety of effects on our respiratory systems, nervous systems, brain function and overall health.

Our Services:

AirSciences provides a variety of services aimed at identifying, correcting, and preventing indoor environmental problems, including:

- Inspections
- Mold Testing (Air & Surface)
- Mold Remediation
- Air Quality Testing
- Hygiene Testing
- Anti-Viral/ Anti-Bacterial Treatments
- Water-Proofing & Humidity Control
- Sump Pump Installation
- Odor Neutralization
- Ventilation & Insulation Services

By utilizing a combination of proven and cutting edge products, methods, and technologies, we provide our clients with the most non-invasive and environmentally conscious solutions possible. We specialize in servicing environmentally sensitive individuals and environments with the highest level of care and concern.

The AirSciences Approach

At AirSciences, we view it as our role not only to provide honest assessments and quality work at a fair price, but also to inform and educate our customers. By gaining a greater understanding of a problem's cause and scope, you are better equipped to make an informed decision for your best interests, based upon fact and reason rather than fear and mis-information. If professional services are required, we will furnish a comprehensive scope of work with a contract price.

We look forward to an opportunity to assist you with your environmental concerns, whether answering a simple question or providing the services necessary to return your property to a safe and healthy environment.

Professional Service... ...Professional Results

At AirSciences, our focus is restoring your indoor environment to one that is clean, safe, and healthy. Our clients place their trust in us. We return that trust with professional service from first contact throughout project completion. We stand by our clients and our work 100%.

Contact AirSciences today to discuss your specific concerns. We are always ready and eager to assist.

We have Air Quality down to a Science.
